

Constellation Energy

Business Development Dossier

Industry	Energy & Utilities
Revenue	\$25B
Employees	15,000
Ideal Customer Profile Score	79

ICP SCORING MODEL

ICP = Signals + Revenue + Employees + Fit (max 100)

Signals (0-35)	Top 4 signals scored; each = base(60%) + recency bonus <30d: 40% <90d: 30% <180d: 20% older: 10%
Revenue (0-25)	\$500M-\$10B sweet spot -> 70-100% of 25 pts Below \$500M -> pro-rata x 0.5 Above \$10B -> 60%
Employees (0-20)	2,000+ preferred (70-100%) 500-2K partial (50-70%) Below 500 -> pro-rata x 0.3
Fit (0-20)	High-fit types: reorg, transformation, M&A, hiring, funding, partnership -> 5 pts ea (max 12) + diversity 2/type (max 8)

Prepared March 19, 2026

McChrystal Group

Leadership Advisory & Organizational Effectiveness

SECTION 1

Organization Snapshot

Legal Name	Constellation Energy Corporation
Headquarters	Baltimore, Maryland
Founded	2022
Ownership	Public (NASDAQ: CEG); spun off from Exelon Corporation in February 2022
Footprint	Operations across 48 states plus Canada. Nuclear fleet concentrated in Illinois, Pennsylvania, New York, Maryland. Calpine assets: natural gas in Texas, California, and across the eastern seaboard; The Geysers geothermal complex in Northern California.

SECTION 1b

Company Overview

Constellation Energy is America's largest clean energy producer, headquartered in Baltimore. Its \$16.4B Calpine acquisition created a 60 GW generation fleet combining nuclear, natural gas, and geothermal assets, positioning the company as the primary power supplier for AI data centers.

SECTION 2

Financial Health & Growth Stage

Understanding Constellation Energy's financial position and trajectory is critical to framing any engagement conversation.

Revenue ~\$25B with Calpine contribution. Pre-acquisition Constellation: \$22B revenue, \$2.4B net income. Calpine adds \$2B+ annual free cash flow. 20% EPS accretion projected for 2026. Stock has surged as AI data center demand drives power premium. Key tailwind: insatiable AI data center energy demand with limited supply. Key risk: integration execution across fundamentally different generation technologies and operating cultures.

SECTION 3

Leadership Team Profiles

The following contacts are recommended as primary outreach targets - champion-level leaders who feel the organizational pain daily and can sponsor McChrystal internally.

Unknown - SVP of Integration or Chief Integration Officer [PRIORITY TARGET]

Unavailable

Outreach rationale: This person manages the merger of nuclear and gas/geothermal operating cultures across 60+ plants - fundamentally different safety paradigms, workforce cultures, and operational tempos.

Unknown - SVP of Commercial / AI Data Center Partnerships [PRIORITY TARGET]

Unavailable

Outreach rationale: The AI data center co-location strategy is the growth engine - requires coordination between generation assets, commercial teams, and technology partners.

Additional leadership team members relevant to the engagement:

Joe Dominguez - President and CEO

Career nuclear executive; led Exelon's generation business before Constellation spinoff

Andrew Novotny - Leader of Calpine Business (former CEO)

Decades of energy expertise; led Calpine through its PE-owned phase under Energy Capital Partners

SECTION 4

Organizational Culture & Structure

Culture and structure are often where McChrystal Group finds the deepest leverage. The following signals indicate how Constellation Energy operates today and where friction exists.

Organizational Structure

Combined fleet organized by generation type: nuclear (Constellation legacy), natural gas (Calpine legacy), and geothermal (Calpine legacy). Each technology has distinct safety cultures, regulatory frameworks, and operational tempos. Nuclear operations are the most heavily regulated, risk-averse, and procedurally rigorous. Gas operations are faster, more market-responsive, and entrepreneurial. Integrating these requires bridging fundamentally different operating paradigms.

Culture Signals

Nuclear culture: safety-first, procedure-driven, zero-tolerance for deviation, slow and deliberate decision-making. Gas/geothermal culture: market-responsive, faster-paced, entrepreneurial (Calpine was PE-owned under Energy Capital Partners and Bridgepoint). The cultural gap between nuclear operators and gas traders is one of the widest in the energy industry. Calpine employees transitioning from PE ownership to public company governance may experience culture shock in the opposite direction - more bureaucracy, more oversight. [INFERRED: nuclear operators may view gas operations as insufficiently rigorous; gas operators may view nuclear culture as overly bureaucratic]

SECTION 5

Recent News & Trigger Events

The following developments from the past 18 months create urgency and provide natural conversation entry points for engaging Constellation Energy.

1. 2026-01-07 - Constellation completes \$16.4B Calpine acquisition

Creates 60 GW clean energy giant - largest generation fleet in America

2. 2026-03-10 - Constellation reports 20% EPS boost from Calpine integration

Financial markets expect rapid synergy realization - integration must deliver quickly

3. 2026-01-01 - AI data center co-location strategy launches - multiple announcements expected throughout 2026

New business model (power-as-platform for AI) requires organizational capabilities Constellation hasn't built yet

4. 2022-02-01 - Constellation spins off from Exelon as standalone entity

Still building its independent identity - Calpine acquisition adds complexity to an already-evolving organization

5. 2025-12-01 - Constellation announces Calpine acquisition agreement

Deal moved from announcement to close in approximately 6 weeks - fast timeline compressed integration planning

SECTION 6

McChrystal Fit Assessment

massive active trigger (\$16.4B deal closed Jan 2026), unique cultural integration challenge (nuclear vs. gas), clear growth catalyst (AI data centers), and the military parallel (conventional + SOF integration) is compelling and differentiated.

Primary Problem

Merging America's largest nuclear fleet with a major natural gas and geothermal portfolio - two fundamentally different safety cultures, operating tempos, and workforce identities - while simultaneously building a new AI data center co-location business model that requires cross-asset coordination.

Best McChrystal Capability Fit

Cross-functional alignment across operating cultures with fundamentally different risk paradigms. McChrystal's experience integrating conventional military forces (procedure-driven, hierarchical) with special operations forces (agile, autonomous) is a direct parallel to the nuclear-gas cultural integration challenge.

Likely Objections to Engagement

Energy industry may view McChrystal as lacking sector-specific expertise

Nuclear regulatory environment (NRC) may limit organizational change in nuclear operations

CEO Dominguez's nuclear background may create bias toward nuclear culture dominance

Competitive Advisory Landscape

McKinsey Energy practice or Roland Berger (energy sector strategy)

Accenture (technology/operations integration)

Internal integration team (likely well-staffed given deal size)

SECTION 7

Conversation Entry Points

These questions are designed for a Senior Partner's first conversation. Each opens a thread that naturally leads to McChrystal Group's capabilities without a direct pitch.

1. How are you thinking about preserving nuclear safety culture rigor while absorbing the faster-paced, market-responsive Calpine operating style - is the goal to converge or to maintain distinct cultures with coordination mechanisms?

This question goes to the heart of the integration philosophy - and the answer determines whether McChrystal's Team of Teams model applies.

2. The AI data center co-location strategy requires commercial teams, generation operators, and technology partners to coordinate in ways that neither legacy organization was designed for - how is that cross-functional capability being built?

Positions McChrystal as understanding the new business model's organizational requirements.

Recommended Meeting Framing

Military parallel: integrating conventional forces (procedure-driven, safety-first, like nuclear) with special operations forces (agile, fast, like gas trading) is exactly what McChrystal did. Frame the conversation around this parallel - it's compelling and differentiated.

SECTION 8

Brand Insights & Market Positioning

Brand strategy reveals organizational priorities and coordination challenges. The following analysis connects Constellation Energy's market positioning to potential McChrystal engagement opportunities.

Constellation's brand is built on clean energy leadership - the largest carbon-free energy producer in America. The Calpine acquisition adds natural gas, which creates a brand tension: how does a 'clean energy' company integrate a fossil fuel fleet? The AI data center positioning is brand-positive - powering America's AI future. Brand value is rising with the AI narrative but needs organizational delivery to sustain the promise. [INFERRED: CMO strategy is likely focused on the AI/clean energy narrative while managing the natural gas perception challenge]

SECTION 9

Deep McChrystal Group Fit Analysis

This is the strategic case for pursuing Constellation Energy. It synthesizes findings from all previous sections into a comprehensive engagement thesis with specific fit dimensions, expected outcomes, stakeholder mapping, and a phased pursuit strategy.

9a. Fit Dimensions

Fit Dimension 1: Nuclear-Gas Cultural Integration

Nuclear and gas operators have the widest cultural gap in the energy industry. Nuclear: zero-tolerance safety culture, NRC-regulated procedures, deliberate decision-making. Gas: market-responsive, fast dispatch, commercial optimization. McChrystal's experience integrating conventional (procedure-driven) and special operations (agile) forces is the exact parallel.

Fit Dimension 2: AI Data Center Platform Build

The co-location strategy requires commercial, generation, and technology teams to coordinate in entirely new ways. This is a new organizational capability, not an optimization of an existing one. McKinsey can design the strategy; McChrystal builds the cross-functional teams that execute it.

Fit Dimension 3: PE-to-Public Culture Transition

Calpine employees are transitioning from PE ownership (Energy Capital Partners/Bridgepoint) to public company governance. This culture shift - more oversight, more process, different incentive structures - adds a layer to the integration challenge.

9b. Cumulative Case

Signal chain: \$16.4B Calpine acquisition -> nuclear-gas cultural merger -> AI data center co-location launches -> 20% EPS accretion expectations -> PE-to-public transition for Calpine workforce. The integration challenge is unique in the energy industry and maps perfectly to McChrystal's methodology.

Revenue potential: \$750K diagnostic (3-4 months), \$1.5M-\$2M cross-fleet operating model (6-12 months), \$500K/year ongoing advisory.

9c. Enterprise Issues

1. Nuclear-Gas Safety Culture Collision: Nuclear operators may view gas operations as insufficiently rigorous; gas operators may view nuclear procedures as bureaucratic impediments. Without intervention, these cultures will balkanize rather than integrate.
2. AI Data Center Organizational Gap: The co-location strategy requires capabilities (tech partnerships, data center operations, real-time power management) that neither legacy organization possesses.
3. PE-to-Public Governance Shock: Calpine employees accustomed to PE speed and autonomy now operate under public company oversight, quarterly earnings pressure, and regulatory scrutiny.
4. Fleet Optimization Complexity: Coordinating dispatch across 60+ plants (nuclear, gas, geothermal) requires shared operational awareness that doesn't exist yet.
5. Geographic Dispersion: Operations across 48 states with distinct regulatory environments and market structures.

9d. Expected Outcomes

1. Cross-Fleet Operating Model - Shared consciousness across nuclear, gas, and geothermal operations while preserving technology-specific safety cultures. Measurable: unified fleet optimization reducing curtailment by

15-20%.

2. AI Data Center Team Build - Cross-functional team structure for co-location strategy. Measurable: 5+ co-location partnerships announced within 12 months.

3. Cultural Integration Framework - Bridge nuclear rigor and gas agility into a unified operating philosophy. Measurable: cross-fleet employee engagement scores above 70% within 12 months.

4. Integration Acceleration - Synergy capture and organizational alignment. Measurable: achieve 60% of projected synergies within 18 months.

9e. Key Stakeholders

Nuclear Fleet

Leader: Unknown

Function: 32.4 GW nuclear generation

McChrystal Relevance: Legacy culture - safety paradigm preservation

Calpine Business

Leader: Andrew Novotny

Function: 26 GW gas + geothermal

McChrystal Relevance: Integration surface - culture transition from PE

Commercial/AI

Leader: Unknown

Function: Data center partnerships

McChrystal Relevance: New capability build - cross-functional coordination

Operations

Leader: Unknown

Function: Fleet-wide dispatch

McChrystal Relevance: Cross-fleet optimization - shared consciousness needed

9f. Opportunity Thesis

Why Now: Calpine acquisition closed Jan 2026. The first 12 months determine cultural trajectory. Acting now prevents balkanization.

Why McChrystal: The nuclear-gas parallel to conventional-SOF integration is unique to McChrystal. No other advisory firm has this narrative. Energy-specific firms (McKinsey Energy, Roland Berger) understand the industry but lack the operating model methodology for cross-culture integration.

Phased Engagement:

- Phase 1 (\$500K-\$750K, 3-4 months): Cultural diagnostic + leadership alignment across nuclear and gas leadership teams. Beachhead: the AI data center co-location team - it's cross-functional by design and represents the combined entity's future.
- Phase 2 (\$1M-\$1.5M, 6-12 months): Cross-fleet operating model.
- Phase 3 (\$400K-\$500K/year): Ongoing advisory.

Multi-Threaded Pursuit:

- Thread 1: Integration leader - direct approach on nuclear-gas culture challenge
- Thread 2: Andrew Novotny (Calpine leader) - perspective on PE-to-public transition challenges
- Thread 3: McChrystal network - military/defense energy connections, nuclear navy veterans in Constellation's workforce
